

Benefiting You and the Community

Save money and fuel: Driving an electric vehicle can save thousands of dollars in fueling costs and more than 6,000 gallons of gasoline over the life of the car.

Kind to the environment: Electric vehicles produce zero tailpipe emissions, improving the air quality and health of our community.

Reducing emissions: Even when electric vehicles are charged with electricity generated from fossil fuels, there are fewer carbon dioxide emissions generated than emissions from a typical conventional auto. With more power generated with natural gas and renewable facilities (wind, solar), electricity generated in the northeast is among the cleanest in the nation.

Energy security: Driving an electric vehicle reduces our demand for petroleum here and from around the world, helping to increase the nation's energy independence.

Fewer trips to the mechanic: Electric vehicles require no oil changes, no new mufflers or catalytic converters.

Fun: It's fun to drive. In a recent survey of electric vehicle owners, 93 percent of respondents said they would purchase an EV again.
